

Packaged Feeds provides client with high end liquid blend to improve gas production.

TARGET – PRODUCE BLEND WITH HIGH CALORIFIC VALUE

Packaged Feeds Ltd has a high end calorific blend which helps our AD clients improve gas production.

PFL has scientifically developed a blend to enhance our clients gas operations. The blend PFL produce is high in dry matter, high in gas production and low in sodium and salts.

The clients energy output's are hit a lot quicker with the PFL blend, which in turn means less product in and decreases in digestate output.

Demand of our PowerFeed stock has grown dramatically and with contracts running nationwide we have new wagons joining the fleet to cope with this demand.

Anaerobic Digestion Case Study

Our services and development of products for anaerobic digestion has taken the company to a new level. Multi-site groups are now using the PowerFeed stock with contracts for deliver being increased on a year on year basis.

PFL is committed to reducing it's carbon footprint through all areas of production and logistics. To find out more please see details below
