

# Packaged Feeds helps divert liquid washings from treatment works to feed stock & saves client £13k PA

## TARGET – BETTER WAYS TO HANDLE CO & BI PRODUCTS

Packaged Feeds Ltd were tasked with looking at how the client could increase its corporate social responsibility while dealing with existing produce washings and bi products.

Diverting the produce washings from going to treatment works has not only increased their environmental credentials, but also reduced their carbon footprint by using our local supply chain.

By reducing traffic on site and lowering the mileage covered by existing disposal routes, we were able to reduce the clients carbon footprint. Not only increasing their green credential but both ‘good news’ stories to promote.

## RESULTS – INCREASED CORPORATE RESPONSIBILITY REDUCED CARBON FOOTPRINT SAVING £13K PER YEAR IN TRANSPORT COSTS

Our services and development of solutions for clients is second to none. Packaged Feeds actively encourages carbon reduction and green initiatives with ‘in house’ engineers and experts who can assist in line side solutions as well as full site cost reduction audits.
